Spain.

Building interoperable read-write Linked Data applications with the W3C Linked Data Platform and the LDP4j framework

# INTRODUCTION TO LDP

# Refreshing the basics

## “Linked Data principles

- Use URIs as names for things
- Use HTTP URIs so that people can look up those names
- When someone looks up a URI, provide useful information, using the standards (RDF\*, SPARQL)
- Include links to other URIs, so that they can discover more things”

Tim Berners-Lee. **Linked data-design issues** (2006) <http://www.w3.org/DesignIssues/LinkedData.html>  
Leo Sauermann and Richard Cyganiak. **Cool URIs for the Semantic Web** (2008) <http://www.w3.org/TR/cooluris/>  
Tom Heath and Christian Bizer. **Linked Data: Evolving the Web into a Global Data Space** (2011) <http://linkeddatabook.com/>

# Let's see an example

<http://id.nandana.org/card#me> ← (1) (2)

```
GET /card#me HTTP/1.1
Host: id.nandana.org
```

← (3)

```
HTTP/1.1 200 OK
Content-Type: text/turtle; charset=UTF-8
Content-Length: 250
```

```
@prefix dc: <http://purl.org/dc/terms/> .
@prefix foaf: <http://xmlns.com/foaf/0.1/> .
```

```
< http://id.nandana.org/card> a foaf:PersonalProfileDocument;
  foaf:primaryTopic <http://example.org/nandana#me> ;
  dc:title 'Nandana's FOAF personal profile' .
```

```
< http://id.nandana.org/card#me> a foaf:Person;
  foaf:name 'Nandana Mihindukulasooriya';
  foaf:workplacehomepage <http://www.oeg-upm.net/> ;
  foaf:workplacehomepage <http://www.centeropenmiddleware.com/>;
  foaf:schoolhomepage <http://www.fi.upm.es/> ;
  foaf:topic_interest <http://dbpedia.org/resource/linked_data> ;
  foaf:based_near <http://dbpedia.org/resource/madrid> .
```

← (4)

HELLO  
my name is

*Nandana*  
*Mihindukulasooriya*

# Linked Data in practice

- Linked Data resources (documents)
  - easier to traverse, live data, less computational cost to the provider
  - slow querying
- Public SPARQL endpoints
  - live data
  - high cost to the provider, low availability
- Data dumps + private SPARQL endpoints
  - set up and maintenance cost, stale data, silos
  - high availability and performance
- Linked Data Fragments
  - less workload on server, high availability
  - more bandwidth, slow querying

**LDP makes these  
resources LD+RW**

# Linked Data Platform 1.0

<http://www.w3.org/2012/ldp/>

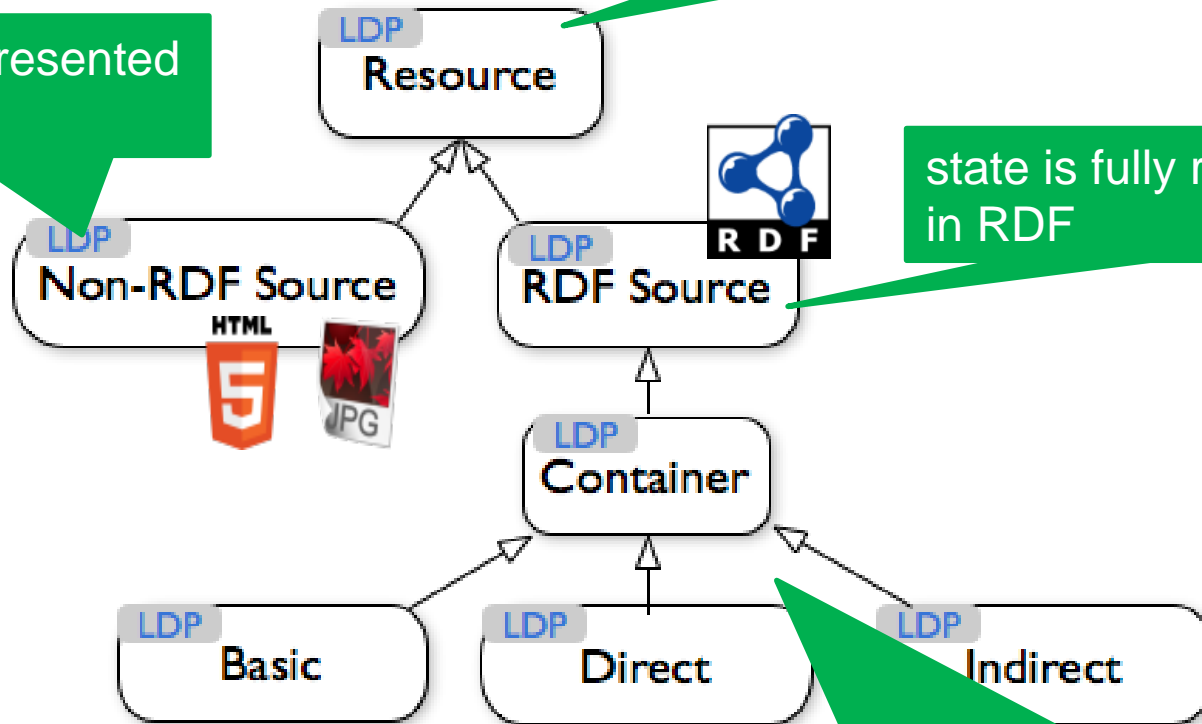

- RESTful protocol for **Read / Write** Linked Data
- Extensions to HTTP protocol
  - Pagination, ordering, partial updates, introspection, creation factories, collections
- Standardization focused of **interoperability**
- Developed by *W3C Linked Data Platform Working Group*
  - 54 participants from 32 organizations
    - Industry: IBM, Oracle, EMC, Fujitsu, OpenLink Software, Base22, ...
    - Academia: **Universidad Politécnica de Madrid**, University of Oxford, DERI, Université de Lyon, INRIA, ...
- *Progress:*
  - W3C Candidate Recommendation 19 June 2014,
  - W3C Last Call Working Draft (3) 7 September 2014,
  - W3C Proposed Recommendation October-November 2014
  - W3C Recommendation, 26 February 2015

# LDP Terminology

state is **NOT** represented  
in RDF

conforms to the lifecycle patterns  
and conventions defined in LDP

state is fully represented  
in RDF

a special type of RDF Source that acts as

- an enumeration of a collection of linked documents
- a creation factory

Learning W3C Linked Data Platform 1.0 with examples

# EXAMPLES

# Few simple scenarios

- Looking up a Linked Data resource (GET on LDPR)
- Modifying a Linked Data resource (PUT/PATCH on LDPR)
- Creating Linked Data resources
  - Basic Container (POST on LDP-BC)
  - PUT to create
  - Creating Linked Data Platform containers
- Deleting a Linked Data resource (DELETE on LDPR)
- Managing non-RDF resources
- Types of LDP Containers
  - Direct Container (POST on LDP-DC)
  - Indirect Container (POST on LDP-IC)

# Looking up a Linked Data resource

- a simple HTTP GET with
  - additional guarantees
    - LDP mandates some features that are optional in HTTP
      - e.g., e-tags, HEAD, OPTIONS
  - Some extensions
    - e.g., paging

# Looking up a Linked Data resource

## GET on LDPR

```
GET /nandana HTTP/1.1  
Host: example.org  
Accept: text/turtle
```

 GET

```
HTTP/1.1 200 OK  
Content-Type: text/turtle; charset=UTF-8  
Link: <http://www.w3.org/ns/ldp#Resource>; rel="type"  
ETag: "123456789"  
Allow: OPTIONS,HEAD,GET,PUT,PATCH  
Accept-Patch: text/ldpatch  
Content-Length: 250
```

 200 OK

```
@prefix dc: <http://purl.org/dc/terms/> .  
@prefix foaf: <http://xmlns.com/foaf/0.1/> .
```

```
<http://example.org/nandana> a foaf:PersonalProfileDocument;  
  foaf:primaryTopic <http://example.org/nandana#me> ;  
  dc:title 'Nandana's FOAF file' .
```

```
<http://example.org/nandana#me> a foaf:Person;  
  foaf:name 'Nandana Mihindukulasooriya';  
  foaf:currentProject <http://www.seals-project.eu/> .
```

# Looking up a Linked Data document

## GET on LDPR

GET /nandana HTTP/1.1

Host:

HTTP/1.1 conformant

should support Turtle and  
JSON-LD representations

advertises support for LDP

Accept:

HTTP/1.1 200 OK

Content-Type: text/turtle; charset=UTF-8

Link: <http://www.w3.org/ns/ldp#Resource>; rel="type"

ETag: "123456789"

Allow: OPTIONS,HEAD,GET,PUT,PATCH

Accept-Patch: text/ldpatch

advertises which operations are allowed

provides  
an entity tag

Content-Length: 250

@prefix dc: <http://purl.org/dc/terms/>

@prefix foaf: <http://xmlns.com/foaf/0.1/>

advertises media types accepted by the PATCH method

<http://example.org/nandana> a foaf:PersonalProfileDocument;

foaf:primaryTopic <http://example.org/nandana>;

dc:title 'Nandana's FOAF file' .

reuses existing vocabularies

use standard vocabularies [ e.g., Dublin Core, RDF(S) ]

<http://example.org/nandana#me> a foaf:Person;

foaf:name 'Nandana Mihindukulasooriya';

foaf:currentProject <http://www.seals-project.eu/> .

has at least one rdf:type set explicitly

# Paging

- Some resources are too large
- Clients may not be able to handle the complete resource
- Alternatives
  - Server-driven
  - Client-driven
- Client preferences
  - max-triple-count, max-kbyte-count, max-member-count
- Page links
  - **next**, canonical, first, last,

# Looking up a Linked Data document

## GET on LDPR with paging (I)

```
GET /nandana HTTP/1.1  
Host: example.org  
Accept: text/turtle  
Prefer: return=representation; max-triple-count="500"
```

GET

```
HTTP/1.1 303 See Other  
Location: <http://example.org/nandana?page1>
```

303 See Other

# Looking up a Linked Data document

## GET on LDPR with paging (I)

GET /nandana HTTP/1.1

Host: example.org

Accept: text/turtle

Prefer: return=representation; max-triple-count="500"

communicates support for LDP Paging and  
maximum desired size

GET

HTTP/1.1 303 See Other

Location: <http://example.org/nandana?page1>

redirects to the first page

303 See Other

# Looking up a Linked Data document

## GET on LDPR with paging (II)

```
GET /nandana?page1 HTTP/1.1
Host: example.org
Accept: text/turtle
Prefer: return=representation; max-triple-count="500"
```

GET

```
HTTP/1.1 200 OK
Content-Type: text/turtle
ETag: "_87e52ce291112"
Link: <http://www.w3.org/ns/ldp#Resource>; rel="type", <http://www.w3.org/ns/ldp#Page>; rel="type"
Link: <http://example.org/customer-relations?p=2>; rel='next'
Link: <http://example.org/nandana>; rel='canonical'; etag="_87e52ce291110"
Allow: GET,OPTIONS,HEAD
```

200 OK

```
@prefix dc: <http://purl.org/dc/terms/> .
@prefix foaf: <http://xmlns.com/foaf/0.1/> .
```

```
<http://example.org/nandana> a foaf:PersonalProfileDocument;
  foaf:primaryTopic <http://example.org/nandana#me> ;
  dc:title 'Nandana's FOAF file' .
```

```
<http://example.org/nandana#me> a foaf:Person;
  foaf:name 'Nandana Mihindukulasooriya';
```

```
...
```

# Looking up a Linked Data document

## GET on LDPR with paging (II)

```
GET /nandana?page1 HTTP/1.1
Host: example.org
Accept: text/turtle
Prefer: return=representation; max-triple-count="500"
```

GET

```
HTTP/1.1 200 OK
Content-Type: text/turtle
ETag: "_87e52ce291112"
Link: <http://www.w3.org/ns/ldp#Resource>; rel="type", <http://www.w3.org/ns/ldp#Page>; rel="type"
Link: <http://example.org/customer-relations?p=2>; rel='next'
Link: <http://example.org/nandana>; rel='canonical'; etag="_87e52ce291110"
Allow: GET,OPTIONS,HEAD
```

advertises the response representation is a page

200 OK

provides a link to the next page

```
@prefix dc: <http://purl.org/dc/terms/> .
@prefix foaf: <http://xmlns.com/foaf/0.1/> .
```

```
<http://example.org/nandana> a foaf:PersonalProfileDocument;
```

```
foaf:pr  
dc:title
```

provides a link to resource being paged and the entity tag of complete resource

```
<http://example.org/nandana#me> a foaf:Person;
foaf:name 'Nandana Mihindukulasooriya';
```

...

# Looking up a Linked Data document

## GET on LDPR with paging (optimized)

```
GET /nandana HTTP/1.1
Host: example.org
Accept: text/turtle
Prefer: return=representation; max-triple-count="500"
Prefer: contents-of-related
```

```
HTTP/1.1 2XX Contents of Related
Content-Type: text/turtle
ETag: "_87e52ce291112"
Link: <http://www.w3.org/ns/ldp#Resource>; rel="type", <http://www.w3.org/ns/ldp#Page>; rel="type"
Link: <http://example.org/customer-relations?p=2>; rel='next'
Link: <http://example.org/nandana>; rel='canonical'; etag="_87e52ce291110"
Allow: GET,OPTIONS,HEAD
```

```
@prefix dc: <http://purl.org/dc/terms/> .
@prefix foaf: <http://xmlns.com/foaf/0.1/> .
```

```
<http://example.org/nandana> a foaf:PersonalProfileDocument;
  foaf:primaryTopic <http://example.org/nandana#me> ;
  dc:title 'Nandana's FOAF file' .
```

```
<http://example.org/nandana#me> a foaf:Person;
  foaf:name 'Nandana Mihindukulasooriya';
```

```
...
```

# Looking up a Linked Data document

## GET on LDPR with paging (optimized)

```
GET /nandana HTTP/1.1
```

```
Host: example.org
```

```
Accept: text/turtle
```

```
Prefer: return=representation; max-triple-count="500"
```

```
Prefer: contents-of-related
```

communicates that the client understand  
"contents-of-related" status code

```
HTTP/1.1 2XX Contents of Related
```

```
Content-Type: text/turtle
```

```
ETag: "_87e52ce291112"
```

```
Link: <http://www.w3.org/ns/ldp#Resource>; rel="type", <http://www.w3.org/ns/ldp#Page>; rel="type"
```

```
Link: <http://example.org/customer-relations?p=2>; rel='next'
```

```
Link: <http://example.org/nandana>; rel='canonical'; etag="_87e52ce291110"
```

```
Allow: GET,OPTIONS,HEAD
```

paged response status code

```
@prefix dc: <http://purl.org/dc/terms/> .
```

```
@prefix foaf: <http://xmlns.com/foaf/0.1/> .
```

```
<http://example.org/nandana> a foaf:PersonalProfileDocument;  
  foaf:primaryTopic <http://example.org/nandana#me> ;  
  dc:title 'Nandana's FOAF file' .
```

```
<http://example.org/nandana#me> a foaf:Person;  
  foaf:name 'Nandana Mihindukulasooriya';
```

```
...
```

# Few simple scenarios

- Looking up a Linked Data resource (GET on LDPR)
- Modifying a Linked Data resource (PUT/PATCH on LDPR)
- Creating Linked Data resources
  - Basic Container (POST on LDP-BC)
  - PUT to create
- Deleting a Linked Data resource (DELETE on LDPR)
- Managing non-RDF resources
- Types of LDP Containers
  - Direct Container (POST on LDP-DC)
  - Indirect Container (POST on LDP-IC)

# Modifying a Linked Data resource

- uses HTTP PUT or PATCH operations
- encourages conditional requests to avoid “lost update” problem

# Modifying a Linked Data resource (I)

## GET on LDPR

```
GET /nandana HTTP/1.1  
Host: example.org  
Accept: text/turtle
```

GET

```
HTTP/1.1 200 OK  
Content-Type: text/turtle; charset=UTF-8  
Link: <http://www.w3.org/ns/ldp#Resource>; rel="type"  
ETag: "123456789"  
Allow: OPTIONS,HEAD,GET,PUT,PATCH  
Accept-Patch: text/ldpatch  
Content-Length: 250
```

200 OK

```
@prefix dc: <http://purl.org/dc/terms/> .  
@prefix foaf: <http://xmlns.com/foaf/0.1/> .
```

```
<http://example.org/nandana> a foaf:PersonalProfileDocument;  
  foaf:primaryTopic <http://example.org/nandana#me> ;

<http://example.org/nandana#me> a foaf:Person;  
 foaf:name 'Nandana Mihindukulasooriya';  
 foaf:currentProject <http://www.ldap4j.org/> .

HTTP/1.1 204 No Content

Link: <http://www.w3.org/ns/ldp#Resource>; rel='type'

204 No Content

# Modifying a Linked Data resource

## PUT on LDPR

PUT /nandana HTTP/1.1

Host: example.org

If-Match: W/'123456789'

Content-Type: text/turtle

uses conditional requests

PUT

@prefix dc: <http://purl.org/dc/terms/> .

@prefix foaf: <http://xmlns.com/foaf/0.1/> .

<http://example.org/nandana> a foaf:PersonalProfileDocument;  
foaf:primaryTopic <http://example.org/nandana#me> ;  
dc:title 'Nandana's FOAF file' .

<http://example.org/nandana#me> a foaf:Person;  
foaf:name 'Nandana Mihindukulasooriya';  
**foaf:currentProject** <http://www.ldap4j.org/> .

Modify

HTTP/1.1 204 No Content

Link: <http://www.w3.org/ns/ldp#Resource>; rel='type'

204 No Content

# Modifying a Linked Data resource

## PATCH on LDPR

PATCH /nandana HTTP/1.1

Host: example.org

If-Match: W/'123456789'

Content-Type: text/ldpatch

PATCH

@prefix foaf: <http://xmlns.com/foaf/0.1/> .

Delete <http://example.org/nandana#me> foaf:currentProject <http://www.seals-project.eu/>.

Add <http://example.org/nandana#me> foaf:currentProject <http://www.ldap4j.org/>.

HTTP/1.1 204 No Content

Link: <http://www.w3.org/ns/ldp#Resource>; rel='type'

204 No Content

# Modifying a Linked Data resource

## PATCH on LDPR

PATCH /nandana HTTP/1.1

Host: example.org

If-Match: W/'123456789'

Content-Type: text/ldpatch

uses conditional requests

uses LDP Patch format

PATCH

@prefix foaf: <http://xmlns.com/foaf/0.1/> .

Delete <http://example.org/nandana#me> foaf:currentProject <http://www.seals-project.eu/> .

Add <http://example.org/nandana#me> foaf:currentProject <http://www.ldap4j.org/> .

HTTP/1.1 204 No Content

Link: <http://www.w3.org/ns/ldp#Resource>; rel='type'

204 No Content

# Modifying a Linked Data resource

## Constraint validation errors

HTTP/1.1 422 Unprocessable Entity

Link: <<http://www.w3.org/ns/ldp#Resource>>; rel='type'

← 422 Unprocessable Entity

# Modifying a Linked Data resource

## Constraint validation errors

HTTP/1.1 422 Unprocessable Entity

Link: <http://www.w3.org/ns/ldp#Resource>; rel='type'

publishes any constraints on create/update

Link: <http://example.org/constraints/101>; rel='http://www.w3.org/ns/ldp#constrainedBy'

- constrainedBy link provides any constraints on the update

GET /constraints/101 HTTP/1.1

Host: example.org

Accept: \*/\*

GET

HTTP/1.1 200 OK

Content-Type: text/plain; charset=UTF-8

Content-Length: 150

constraints can be machine readable  
(e.g., Shape Expressions language)  
or in natural language

200 OK

When modifying the current project of a person, the project must be preserved using the foaf:pastProject property. Suggested Update:

@prefix foaf: <http://xmlns.com/foaf/0.1/> .

Delete <http://example.org/nandana#me> foaf:currentProject <http://www.seals-project.eu/>.

Add <http://example.org/nandana#me> foaf:currentProject <http://www.ldap4j.org/>.

Add <http://example.org/nandana#me> foaf:pastProject <http://www.seals-project.eu/>.

# Few simple scenarios

- Looking up a Linked Data resource (GET on LDPR)
- Modifying a Linked Data resource (PUT/PATCH on LDPR)
- Creating Linked Data resources
  - Basic Container (POST on LDP-BC)
  - PUT to create
- Deleting a Linked Data resource (DELETE on LDPR)
- Managing non-RDF resources
- Types of LDP Containers
  - Direct Container (POST on LDP-DC)
  - Indirect Container (POST on LDP-IC)

# LDP Basic Container

- Allows creation of new resources through POST
- Maintains containment triples

	Subject	Predicate	Object
Pattern	LDPC-URI	ldp:contains	document-URI
Example	<a href="http://example.org/nandana/contacts/">http://example.org/nandana/contacts/</a>	ldp:contains	<a href="http://example.org/nandana/contacts/raul">http://example.org/nandana/contacts/raul</a>

<http://example.org/nandana/contacts/>

ldp:contains

<http://example.org/nandana/contacts/raul>

Content-Type: text/turtle; charset=UTF-8  
Link: <http://www.w3.org/ns/ldp#BasicContainer>; rel='type', <http://www.w3.org/ns/ldp#Resource>;  
rel='type'  
ETag: W/'123456711'  
Allow: OPTIONS,HEAD,GET,POST  
Accept-Post: text/turtle  
Content-Length: 250
```

200 OK

```
@prefix dc: <http://purl.org/dc/terms/> .  
@prefix foaf: <http://xmlns.com/foaf/0.1/> .  
@prefix ldp: <http://www.w3.org/ns/ldp#>.
```

```
<http://example.org/nandana/contacts/> a ldp:Container, ldp:BasicContainer;  
    dc:title 'Nandana's contact list';  
    ldp:contains <http://example.org/nandana/friends/raul>,  
                <http://example.org/nandana/friends/miguel> .
```

# LDP Basic Container

GET /nandana/contacts/ HTTP/1.1

Host: example.org

Accept: text/turtle

advertises LDP Basic Container semantics

GET

HTTP/1.1 200 OK

Content-Type: text/turtle; charset=UTF-8

Link: <http://www.w3.org/ns/ldp#BasicContainer>; rel='type',

<http://www.w3.org/ns/ldp#Resource>; rel='type'

ETag: W/'123456711'

Allow: OPTIONS,HEAD,GET,POST

Accept-Post: text/turtle

Content-Length: 250

200 OK

supports the POST method

advertises media types accepted by the POST method

has containment triples

@prefix dc: <http://purl.org/dc/terms/> .

@prefix foaf: <http://xmlns.com/foaf/0.1/> .

@prefix ldp: <http://www.w3.org/ns/ldp#> .

<http://example.org/nandana/contacts/> a ldp:Container, ldp:BasicContainer;

dc:title 'Nandana's contact list';

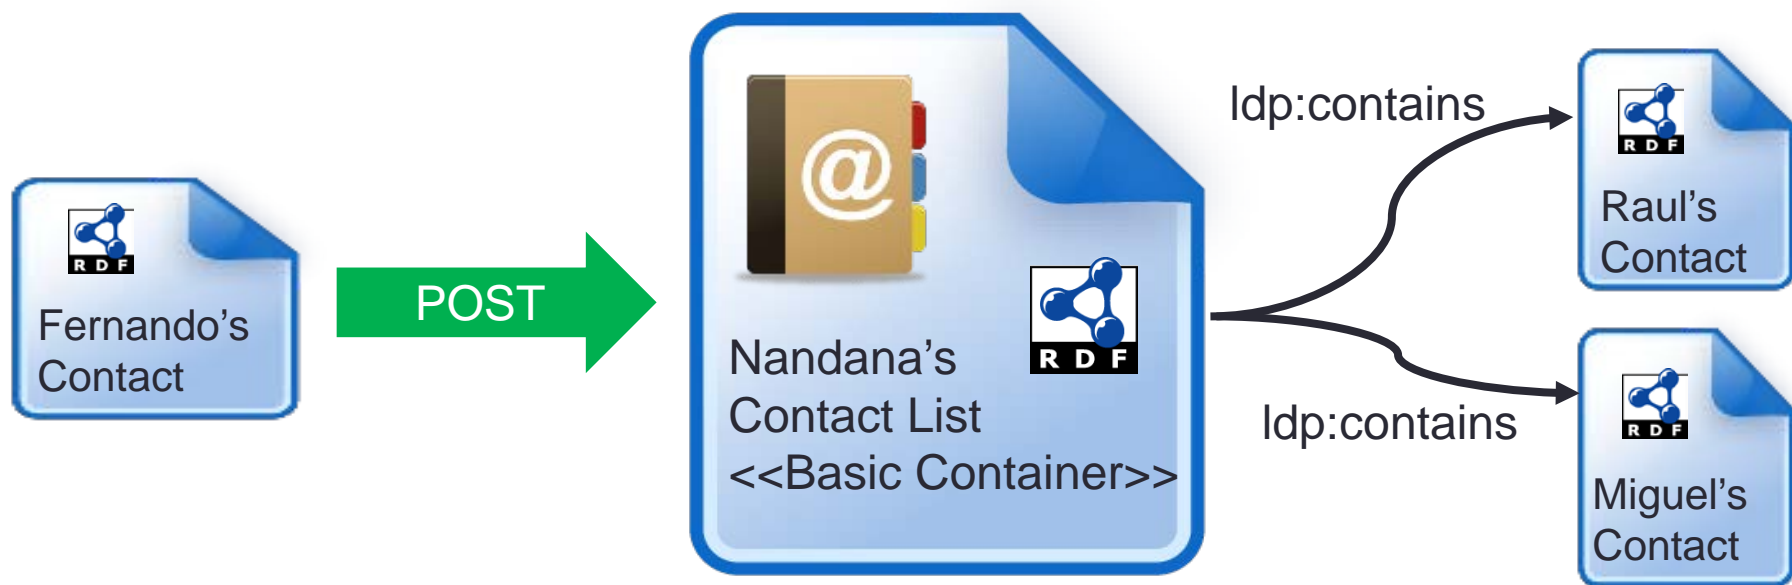

ldp:contains <http://example.org/nandana/friends/raul> ,

<http://example.org/nandana/friends/miguel> .

# LDP Basic Container

## Creating an LDPR

# LDP Basic Container

## Creating an LDPR

```
POST /nandana/contacts/ HTTP/1.1
Host: example.org
Slug: fernando
Link: <http://www.w3.org/ns/ldp#Resource>; rel='type'
Content-Type: text/turtle
```

POST

```
@prefix vcard: <http://www.w3.org/2006/vcard/ns#> .
```

```
<> a vcard:Individual;
  vcard:hasURL <http://example.org/fernando#me> ;
  vcard:hasEmail <mailto:fernado@example.com>;
  vcard:fn "Fernando Serena";
  vcard:hasTelephone [ a vcard:Home, vcard:Voice;
    vcard:hasValue <tel:+3465555555> ] .
```

# LDP Basic Container

## Creating an LDPR

POST /nandana/contacts/ HTTP/1.1

Host: example.org

Slug: fernando

Link: <http://www.w3.org/ns/ldp#Resource>; rel='type'

Content-Type: text/turtle

@prefix vcard: <http://www.w3.org/2006/vcard/ns#>

```
<> a vcard:Individual;
vcard:hasURL <http://example.org/fernando#me>;
vcard:hasEmail <mailto:fernando@example.com>;
vcard:fn "Fernando Serena";
vcard:hasTelephone [ a vcard:Home, vcard:Voice;
vcard:hasValue <tel:+3465555555> ] .
```

POST

provides a hint for the new URI to be minted

requests the LDPR interaction model

a null URI is used to refer to the resource to be created

HTTP/1.1 201 Created

Location: http://example.org/nandana/contacts/fernando

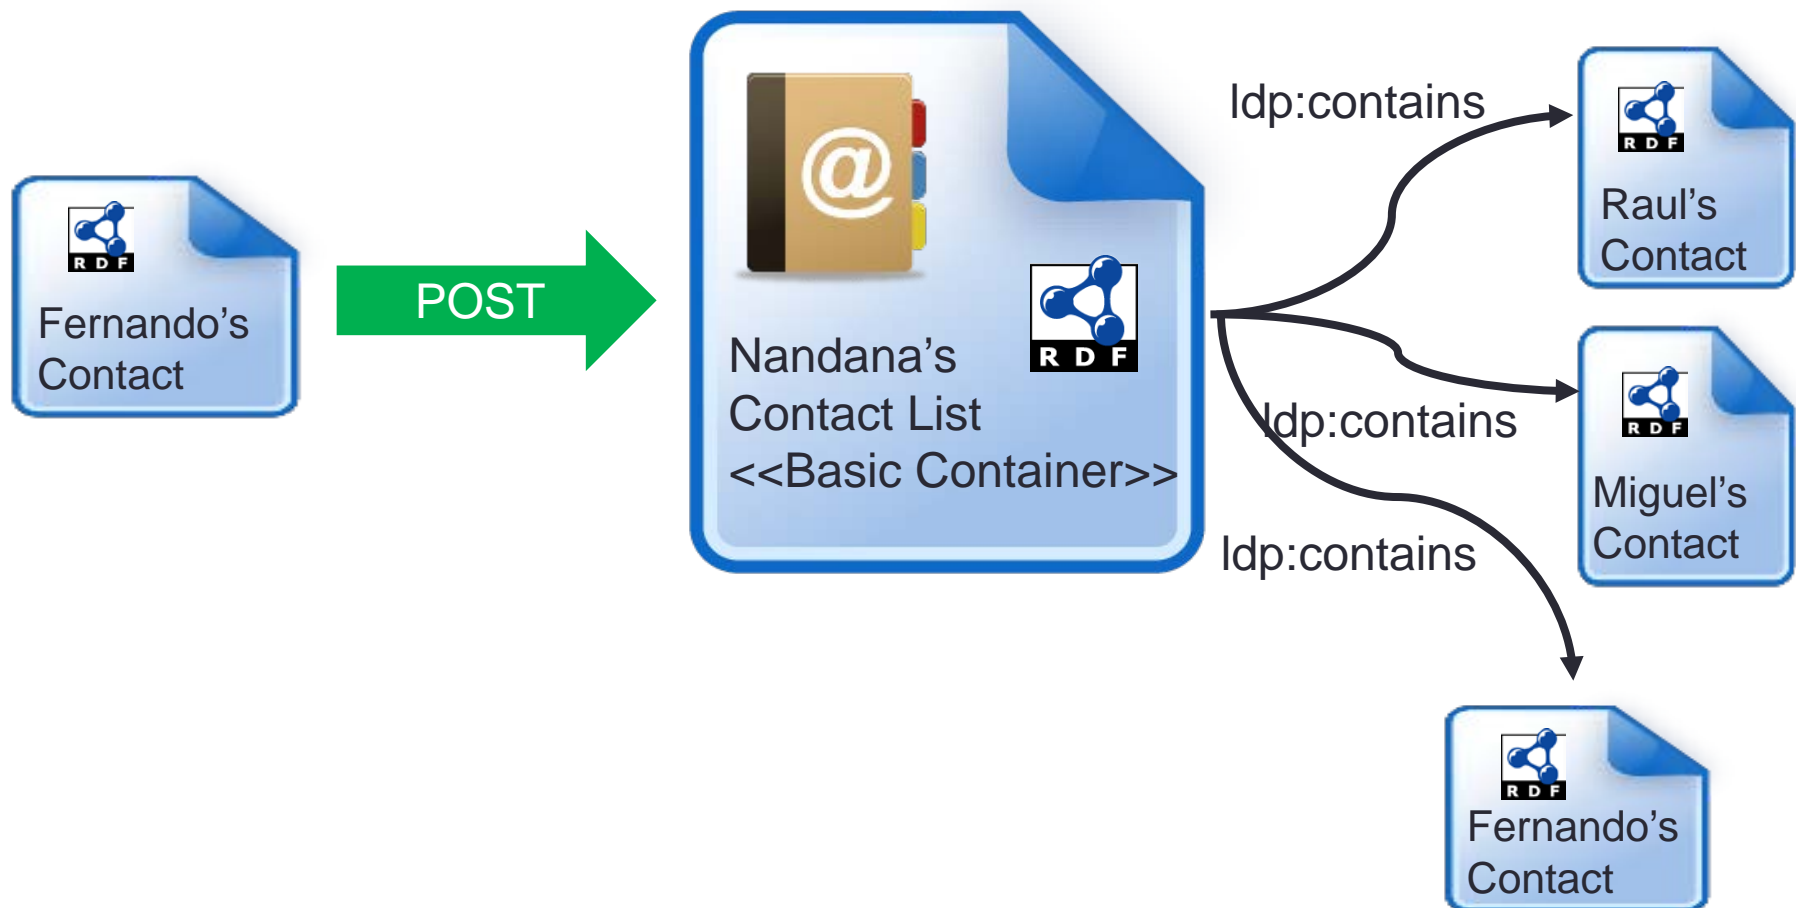

Link: <http://www.w3.org/ns/ldp#Resource>; rel='type'

Content-Length: 0

provides the URI of the newly created resource

# LDP Basic Container

## Creating an LDPR

# LDP Basic Container

## After the resource creation

Learning W3C Linked Data Platform 1.0 with examples

# TYPES OF LDP CONTAINERS

# LDP Terminology

state is **NOT** represented  
in RDF

conforms to the lifecycle patterns  
and conventions defined in LDP

state is fully represented  
in RDF

a special type of RDF Source that acts as

- an enumeration of a collection of linked documents
- a creation factory

# Isn't LDP Basic Containers enough?

- For most use cases, may be.
- There are some limitations
  - can't use domain-specific relationships
    - containment triples have a fixed pattern for  $\langle s, p, o \rangle$  of the triple
  - containment triples can only say relationships among two web resources (the LDPC and resources created using it)
    - some use cases require relationships between resources other than the LDP Container itself
    - some use cases require relationship among real world resource (in contrast to information resources / documents)
- LDP Direct/Indirect containers introduce membership triples to address aforementioned limitations

# LDP Direct Container

- Maintains the containment triple similar to the basic containers
- Maintains membership triples
- Can use domain vocabularies

	Subject	Predicate	Object
Pattern	membership-constant-URI	membership-predicate	member-derived-URI
Example	http://example.org/nandana#me	foaf:knows	http://example.org/nandana/contacts/raul

defined in the container

# LDP Direct Container

<http://example.org/nandana/contacts/>

<http://example.org/nandana/contacts/raul>

ldp:contains

foaf:knows

<http://example.org/nandana/contacts/miguel>

ldp:contains

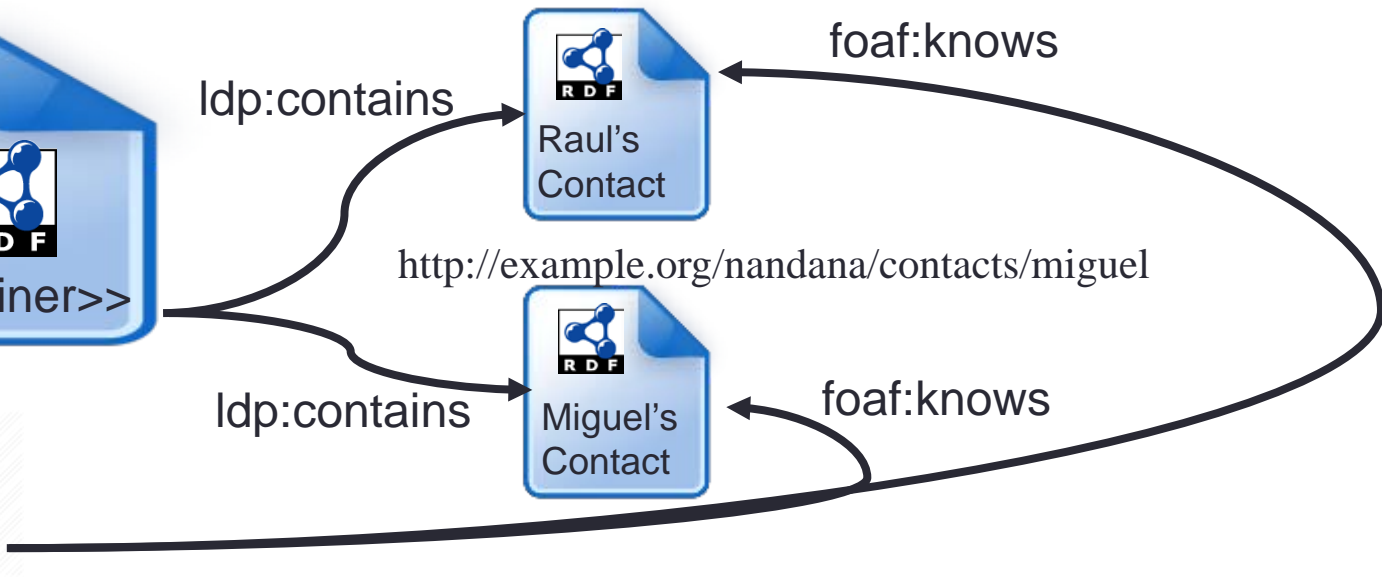

foaf:knows

Nandana

<http://example.org/nandana#me>
